1. Introduction

Problem Identified :

- Small and medium businesses face difficulty in managing GST billing, invoices and tax calculations manually.
- Existing solutions are either complex or expensive, leading to inefficiency and errors in financial tracking.

Solution Proposed:

- To address these challenges, a GST Smart Manager application is proposed, developed using Flutter and Firebase.
- The system offers a centralized platform that simplifies the management of clients, products, invoices, GST calculations, and business reports, enabling faster, more accurate, and efficient business operations.

2. Objectives

Objectives:

- To automate GST calculations (CGST, SGST, IGST).
- To generate financial reports and GST summaries.
- To manage clients and invoices efficiently.
- To support multiple businesses within a single application.

3. Feature /Functionality

Client Management

- Add, update, and manage client details
- Maintain organized customer records

GST Calculator

- The system automatically calculates GST taxes including CGST, SGST , and IGST based on the transaction type.
- It supports GST tax slabs such as 0% , 5% , 12% , 18% , and 28%.

Reminder System

- Sends reminders for pending payments
- Helps track due dates efficiently

Client Tracker & Reports

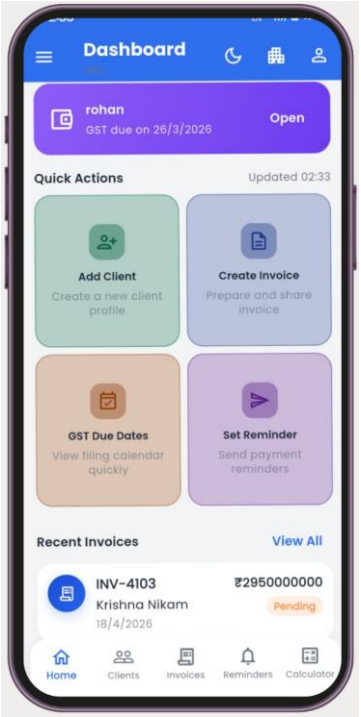
- Track client transactions and balances
- Generate invoice reports with PDF and Excel export

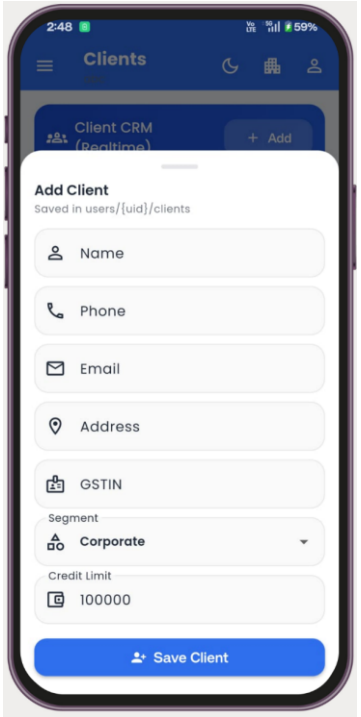
4. Sustainable Development Goals

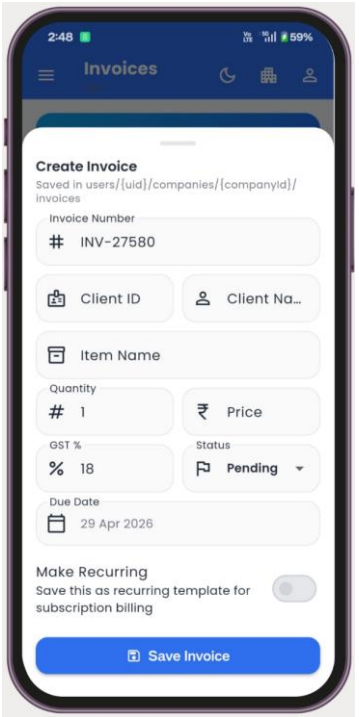
Finance:

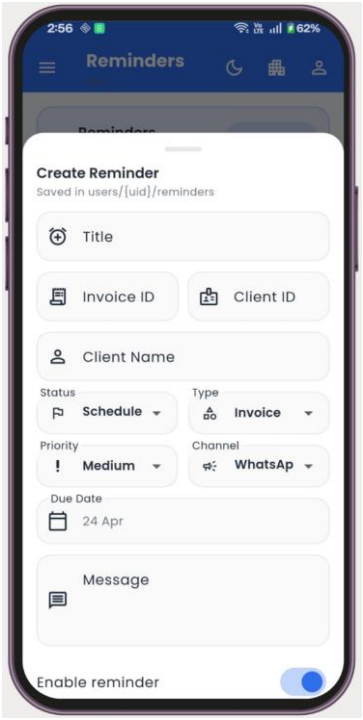
- Agenda 21 introduced the importance of finance in achieving sustainable development goals
- Addis Ababa Action Agenda (2015) provided a global framework for financing sustainable development
- Rio+ 20 Conference (2012) emphasized the need for large-scale financial resources to support sustainability initiatives

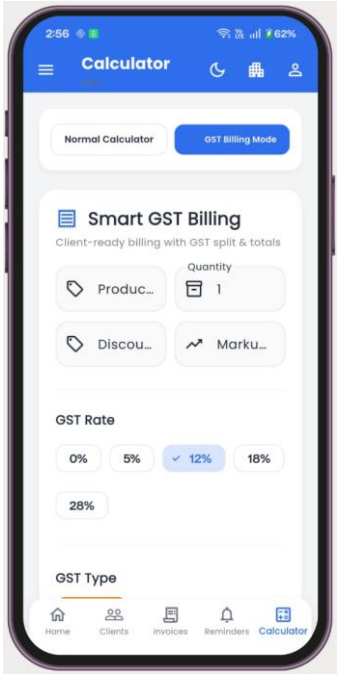
5. Outcome of Project











6. Technology Stack

Frontend

- Flutter Framework
- Dart Programming Language

Backend

- Firebase Authentication (Email & Password)
- Cloud Firestore (NoSQL Database)
- Firebase
