1. Introduction

- The **Car Sales Management System** is a mobile application designed to help car dealerships efficiently manage their vehicle inventory and sales transactions.
- The system enables administrators to add new or used cars, confirm customer purchases, process payments, and maintain organized sales records and customers can see it.

Problem Identified

- Manual car sale management leads to errors and inefficient tracking of inventory.
- Difficulty in managing new and used car sales records separately.
- Lack of centralized system for storing customer purchase details.
- Traditional methods make payment tracking and sales confirmation slow and complicated.

Proposed Solution

- Develop a mobile application that allows administrators to manage car inventory digitally.
- Provide a system to classify vehicles as new or used.
- Enable admins to confirm customer purchases and process payments directly through the app.
- Maintain a centralized database for car details and sales records.

2. Objectives

1. To develop a mobile-based vechicles and their inventry selling platform.

2. To provide an efficient system for managing new and used car inventory.

3. To develop a mobile based vechicle renting platform.

4. To provide an efficient system for vechicles related service appointment system

5. To maintain accurate digital records of sales and vehicles.

3. Scope

1. The system can be applied in car dealerships and automobile showrooms.

2. The application can be useful for sales managers and dealership administrators.

3. The system helps in managing vehicle inventory and sales transactions efficiently.

4. The application can be expanded to support multiple dealerships and online car booking systems.

4. Feature /Functionality

- Feature 1 — Admin Login

Secure authentication system allowing administrators to access the dashboard and manage car sales.

- Feature 2 — Add Car Details:

Admin can add car information such as brand, model, price, and classify the car as new or used.

- Feature 3 — Confirm Customer Purchase

Admin confirms a customer's purchase by selecting car details and entering customer information.

- Feature 4 — Payment Processing

The system supports digital payment confirmation for completing the car purchase transaction.

- Feature 5 — Sales Record Management

All sales transactions are stored in a database for future reference and reporting.

6. Technology Stack

- Frontend: Flutter (Dart)
- Backend: Node.js
- Database: Firebase
- Payment Integration: UID
- Development Tools: Android Studio
