1. Introduction

- **Problem Identified :**
- Citizens find it difficult to report public issues like road damage, garbage, water leakage, and streetlight problems.
- Complaints are often delayed because there is no proper system to track them.

- **Solution Proposed :**
- A mobile application where users can submit complaints with photo and location.
- Complaints are stored in a database and sent to authorities, and users can track the status in real time.

2. Objectives

Objective 1 — Complaint Submission with Multimedia and Location Support Enable users to register public issues by providing a text description, category selection, real-time photo uploads, and precise GPS location.

Objective 2 —Voting System Implement a polling mechanism for every complaint, allowing citizens to vote and prioritize issues so that high-demand repairs are addressed first by authorities.

Objective 3 —Enable users to register public issues by providing precise GPS location.

Objective 4 — Status Tracking and Evidence-Based Verification Provide a real-time tracking system (Pending, In Progress, Resolved) that requires "Before" and "After" photo documentation as digital proof of work completion.

3. Scope

1. Can be used in cities and municipal offices to report problems like road damage, garbage, or water leakage.

2. Useful for citizens to easily send complaints with photo and location through a mobile app.

3. Helps authorities to track complaints and solve problems faster.

4. Feature /Functionality

Feature 1 : Complaint Submission

Users can submit complaints by entering a description, selecting a category, and uploading a photo. The app also captures the GPS location of the issue.

Feature 2 : Image and Location Support

The system uses Flutter Camera to capture images and Google Maps to detect the exact location of the problem.

Feature 3 : Complaint Tracking System

Users can track the status of their complaints such as Pending, In Progress, and Resolved. The data is stored and updated using Firebase backend.

5. Outcome of Project

1) User can register and log in to the application.

2) User can submit complaints with photo and location.

3) Complaints are stored in Firebase database.

4) Admin can view and update complaint status.

5) User can track complaint status (Pending, In Progress, Resolved).

6. Technology Stack

- **Frontend (GUI) :** Flutter
- **Backend / Database :** Firebase
- **APIs Used :** Flutter Camera API, Device Native Geolocation APIs, Firebase APIs (Backend & Database)
